

ECHO 5.0

25/07/2024 - 18/08/2024

ECHO Project aim to create impact by achieving Sustainable Development Goal (SDG) 13.3 Climate Action by educating communities about climate change & build action plans to reduce critical factors affecting the environment.

Eleven eco-bricks are being created from the plastic waste collected. Instead of being disposed of in a landfill, single-use plastic is converted into a valuable product to help fund crowdfunding. 5R concept is always the purpose and the core of effort to create a sustainable environment

In Hike Up Pick Up, volunteers hiked a 5km trail in Taman Tugu while also engaging in environmental conservation by picking up rubbish along the way. The initiative aimed to promote eco-consciousness and community involvement, combining the joy of hiking with a commitment to preserve nature. This activity encouraged volunteers to contribute and reflecting values social responsibility, and sustainability.

ECHO 5.0 had ended successfully, thanks to the dedication of all the people involved, the volunteers that committed in this 4 weeks project played a crucial role in creating the lasting impact, alongside value-aligned partners which delivered insightful content as well as the organising committee that strive their best to ensure the experience of volunteers

ECHO 5.0
